Returns Policy

Synthetic sample document, created for product testing. No real company, policy or record.

Document ID RP-SYN-2026-07 Version 2.3 Effective 2026-10-01 Owner: Returns Desk

RP-1 Scope

RP-1.1 This policy covers returns of standard catalogue components supplied under a pilot order. It does not cover tooling, consumables or custom parts.

RP-1.2 A return is valid only when the buyer has a return reference issued by the returns desk. The reference is quoted on every communication about the return.

RP-1.3 Where this policy and a signed order schedule disagree, the order schedule wins for that order only.

RP-2 Definitions

RP-2.1 Delivery date means the date the carrier records handover at the buyer dock.

RP-2.2 Invoiced value means the unit price on the accepted order multiplied by the quantity returned, excluding freight and duty.

RP-2.3 Restocking charge means the deduction applied to a return to cover inspection, repacking and put-away.

RP-3 Standard returns

RP-3.1 A buyer may return standard catalogue components for credit within 30 days of delivery, provided the packaging is unopened and the labels are legible.

RP-3.2 Standard returns need no written approval. The buyer raises the return in the portal, prints the label and books collection.

RP-3.3 Credit for a standard return is issued after goods-in inspection confirms the quantity and condition.

RP-3.4 Opened packaging is accepted only where the fault is ours, and only with photographs attached to the return record.

RP-4 Late returns

RP-4.1 The 30-day window in RP-3.1 runs from the delivery date recorded by the carrier.

RP-4.2 A return requested more than 30 days after delivery is accepted only with written exception approval from the returns desk. A restocking charge of 15 percent of the invoiced value applies to every approved late return, and the charge is deducted from the credit note rather than invoiced separately.

RP-4.3 Exception approval is valid for the quantity and part numbers named in the approval. A second shipment needs a second approval.

RP-5 Refunds and credit

RP-5.1 Credit is issued to the account that paid the original invoice. Cash refunds are not available on account orders.

RP-5.2 Credit notes are raised within ten working days of a passed inspection.

RP-6 Exceptions

RP-6.1 Faulty components are accepted at any time inside the warranty period and carry no restocking charge.

RP-6.2 Pilot orders may carry a written deviation from RP-3 and RP-4. The deviation is recorded on the order schedule and is not implied by any email.

RP-6.3 Regulated components are excluded from this policy and follow the separate handling instruction issued with the order.

RP-7 Restocking charges

RP-7.1 Standard returns carry no restocking charge.

RP-7.2 Approved late returns carry the charge stated in RP-4.2.

RP-7.3 Returns refused at goods-in for condition carry no charge, because no credit is raised.

RP-8 Appeals

RP-8.1 A buyer may appeal a refused return once, in writing, within ten working days of the refusal notice.

RP-8.2 The appeal is reviewed by a second reviewer who did not decide the first case.

RP-8.3 The appeal decision is final for that return reference.

RP-9 Records

RP-9.1 Return records are kept for six years from the credit note date.

RP-9.2 Photographs, inspection notes and approvals are part of the record and are not deleted when a case closes.

RP-9.3 This policy is reviewed every year, or earlier if a pilot schedule changes the return terms.
